

Access Merlin Data From Anywhere Using Your Mobile Device

Merlin data on your mobile device

Merlin Mobile runs on your mobile device and works seamlessly with Merlin Enterprise so you can view, acknowledge and annotate your data from anywhere, whether you're working in the field or on vacation! Use Merlin Mobile to view tabular and graphical data in real time, to give you the versatility and flexibility you need when on the go.

View events in real time

Merlin Mobile delivers powerful graphics to your mobile device and displays color coded data to reveal events and alarm conditions, so you can evaluate trends and take immediate action.

Acknowledge Alarms

You also have the ability to acknowledge alarms simply by clicking on them. When this is recorded in your database, the alarm color reverts to green so other users can see your acknowledgement in real time.

Merlin Mobile is available as a subscription service. Merlin Enterprise users and grabdata.com subscribers can add this option to their current services.

Enter Field Observations

Field observations entered from your handset will be stored in the database and displayed on reports and graphs generated by Merlin Web.

With a few clicks, annotate any field event (storm damage, debris blocking a grate), instrument calibration or malfunction. The event will be recorded in your database and displayed on time series plots for that instrument, to keep your co-workers and customers up-to-date.

Field events that are entered using Merlin Mobile will appear in a Merlin Chart back at the office.
